Get Directions <http://goo.gl/maps/3FOuS> Specific building directions will follow.

Course Instructor James V. Jones of Logistics Management Associates
Cost No Cost.
Contractor personnel directly supporting DIMP process are welcome to attend.

Course Overview:

The Logistics Support Analysis course is a detailed presentation of the LSA process as it is applied to procurement programs. The course presents the concepts, theories and philosophies of LSA, and then allows students to experience its application through realistic practical exercises. Implementation methods of LSA for design, upgrade, and off the shelf programs for both hardware and software are discussed to determine appropriate application techniques for both the buyer and the seller.

This course is a comprehensive study of how the LSA process can be applied in a cost-effective manner to lower acquisition costs and whole life costs. The course focuses on how to obtain the maximum benefit for the least investment in time and money.

A significant benefit of this course is resolving the myths and horror tales that have surrounded the LSA process. At the completion of this course students will understand that LSA does not create a large cost for acquisition; that LSA does not equate to useless data and databases; and that, when done properly, LSA is a painless, valuable and cost effective process.
